                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     This sequence encodes a pacific yew taxadiene synthase (TS). The sequence can be used to increase taxol blosynthesis into taxoids in transformed ceals. The nucleic acid sequences can be modified to produce proteins with improved efficiency, and to redirect the targeting of the expressed polypeptide. The modifications can be to alter catalytic efficiency, to modify substrate utilisation, and to alter product outcome. The antibodies specific for the mature native pacific yew TS polypeptide can be used to purify TS polypeptides, cloning TS homologues from Pacific yew or other plant species, and as probes for blots and immunoassays
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        676
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Agaarctaagarractcaarcagaagargargarccccc----garrrccaaaraa 730

comprising a region with at least 20% identity to region 255-535 of a 548 mino acid (aa) sequence (la), given in AAY90831. (I) contains nine alpha carbon actoms (alphaC) that have interatomic distances, between each other, within tabulated ranges, have a centre point (within a sphere of radius 2.3 Angstrom) within tabulated ranges, and have an ordered rangement of R groups (defining as side chalms), excluding specific tabulated arrangement of R groups (defining as side chalms), excluding specific tabulated arrangements (tables given in the specification). (I), and related enzymes, are used to produce a wide range of terpenoids (e.g. cyclic, acylic, optionally hydroxylated), useful e.g. as fragrances, flavours, pheromones, defensive agents, pigments, antitumour agents, components of signal transduction pathways, precursors of steroid components of signal transduction pathways, precursors of steroid components of signal transduction pathways, precursors of steroid conding them) are used as controls in the analysis of products formed by enzymatic synthesis; as nutrient supplements; for affinity purification of isoprenoids; or to develop immunological reagents or nucleic acids for monitoring expression of terpene synthases may produce novel terpene products.                                                                                                                                                                                                                   monoterpene synthases from the grand fir. These include (-)-camphene synthase, (-)-beta-phellandrene synthase, terpinolene synthase, (-)-beta-phellandrene synthase, terpinolene synthase, (-)-limonene((-)-alpha-pinene synthase, limonene synthase, myrcene synthase and pinene synthase. The sequences can be used to produce transgenic plants expressing high levels of the enzymes, resulting in levels which are useful in protecting against and treating cancers, and to confer insect resistance on plants

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         AGGCGTGGGATGGCAAGATGCAATCCTATTCCTGATGTCGATGACACTGCCATGGGTCT 1260
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present invention provides the protein and coding sequences of monoterpene synthases from the grand fir. These include (-)-camphene synthase, (-)-beta-phellandrene synthase, terpinolene synthase, (-)-alpha-pinene synthase, immonene/(-)-alpha-pinene synthase, immonene synthase, myrcene synthase and pinene synthase. The sequences can be used to produce transgenic plants expressing high lavels of the enzymes, resulting in levels which are useful in protecting against and treating cancers, and to confer insect resistance on plants
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                terpene

The sequences when expressed in transfected cells may also be used for the production or modification of flavour and aroma properties, improvement of defense capability, and the alteration of other ecological interactions mediated by mycrene, limonene, pinene, or their derivatives. In particular they can be used for the production
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            New isolated gymnosperm monoterpene synthase DNA - obtained from Grand fir (Abies grandis), used to provide plants with modified production of monoterpenes, e.g. mycrene, limonene or pinene.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ceccarrecarerecacacacacrarrerracrearcreaecreaerrecerrecerr

These include (-)-camphene synthase, (-)-beta-phellandrene synthase, terpinolene synthase, (-)-limonene/(-)-alpha-pinene synthase, limonene synthase. myrcene synthase and pinene synthase. The sequences can be used to produce transgenic plants expressing high levels of the enzymes, resulting in levels which are useful in protecting against and treating cancers, and to confer insect resistance on plants

The present invention describes an isolated terpene synthase (1)

Comprising a region with at least 20% identity to region 265-535 of a 548

amino acid (aa) sequence (1a), given in AAY90831. (1) contains nine alpha
carbon atoms (alphaC) that have interactomic distances, between each
carbon atoms (alphaC) that have interactomic distances, between each
cother, within tabulated ranges, have a centre point (within a sphere of
radius 2.3 Angstrom ) within tabulated aranges, and have an ordered
arrangement of R groups (defining as side chains), excluding specific
carbulated arrangements (tables given in the specification). (1), and
related arrangements (tables given in the specification). (1), and
related enzymes, are used to produce a wide range of terpenoids (e.g.
cyclic, acylic, optionally hydroxylated), useful e.g. as fragrances,
flavours, pheromones, defensive agents, pigments, antitumour agents,
components of signal transduction pathways, precursors of steroid
bormones and bile acids, as photoreceptors and as co-factor side chains.
Some synthases with little or no catalytic activity (and nucleic acids
correcting expression of terpene synthases or inheritence of the gene in
collispicating expression of terpene synthases may produce novel terpene
contonering programs. The new synthases may produce novel terpene
products. AAA38910 to AAA38938 and AAY90831 to AAY90859 represent
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             1195
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           1365

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
